**Re: Omron's Involvement in the New Education and Training Model (NETM)**

To Whom It May Concern:

The Western Parkland City Authority (WPCA) is the NSW Government agency responsible for delivering, coordinating, and attracting investment to the Western Parkland City in Western Sydney.

Omron is one of our industry partners on our New Education and Training Model (NETM) – a four-year pilot to build industry skill levels in the region. The aim of the pilot is to support investment and job creation in target sectors in the Western Parkland City, including advanced manufacturing and other industries where automation is rapidly developing.

As part of this project, Omron has collaborated with the University of Technology Sydney (UTS) to develop a short education course on Basic Use and Programming of Collaborative Robots.

The training course is designed to upskill industry employees and transform local businesses through advanced automation. Omron has supported the NETM with their industry knowledge and advanced technology by supplying TM Collaborative Robots and related intellectual property on their programming and use.

Omron have been responsive and pro-active partners for the NETM. This has been a highly popular collaboration and the micro-credential has an extensive waiting list for enrolments.

Your sincerely,
